

PROTECT FLORIDA'S WATERWAYS

Prevent Petroleum Pollution

- Always monitor fueling operations. Don't top off your tank – fill only to 90%.
- Clean up any spills immediately with rags or other absorbent materials.
- Do not hose off spilled fuel into the water.
- Do not use soap or detergents on spills. This makes the problem worse and violates federal law.
- Equip your vessel with fuel/air separators and whistling vents.
- Fuel your boat on the upland whenever possible.
